Flexible Sensor Endoscopes
for ENDOCAM Logic 4K Camera Platform

Flexible Sensor Cystoscope

Ultimate flexibility meets sensor technology

The **MAMBA vision** is the 3rd member of Richard Wolf's flexible sensor endoscope family featuring bidirectional 210° deflection, a lightweight, ergonomic handle and axial cable to give the operator precise control and navigation.

The thin and flexible outer sheath coupled with an 11.5 Fr. beveled distal tip facilitates ease of insertion and improves patient comfort while providing a brilliant, high quality image with the latest in sensor technology.

The 7.5 Fr. large working channel allows for optimal irrigation for both diagnostic and therapeutic procedures.

Cystoscopy

210° Deflection upward/downward

mamba VISION

Flexible Sensor Cystoscope

- 210° deflection upward/downward for precise control and navigation
- 7.5 Fr. large working channel for optimal irrigation
- Atraumatic, 11.5 Fr., beveled distal tip for easy insertion and patient comfort
- 16.2 Fr. sheath \varnothing
- Dual LED distally for superior illumination
- Two programmable camera buttons capable of controlling up to four functions
- Special Imaging Mode (SIM) compatible
- Ergonomic handle
- Axial cable

■ Dual LED Illumination

■ Large 7.5 Fr. Working Channel

Atraumatic, 11.5 Fr., Oblique Distal Tip

Flexible Single Channel Sensor Ureterorenoscope

The multi-talented instrument for all-around application

Ureterorenoscopy

The **BOA vision** boasts the latest sensor technology for a crisp, clear image. The slim design of 6.6 Fr. on the distal tip, paired with improved shaft stiffness make this single channel flexible URS ideal for difficult and small anatomy.

Engineered with a 3.6 Fr. working and irrigation channel and bidirectional 270° deflection, the **BOA vision** can be inserted through an access sheath as small as 9.5 Fr..

Boa
VISION

**Flexible Single Channel
Sensor Ureterorenoscope**

- Fits through 9.5 Fr. access sheaths
- 270° deflection upward/downward
- 3.6 Fr. working channel
- Atraumatic, 6.6 Fr., beveled distal tip for easy insertion
- 8.7 Fr. sheath \varnothing
- Integrated LED illumination and distal image sensor
- Two programmable camera buttons capable of controlling up to four functions
- Special Imaging Mode (SIM) compatible
- Ergonomic handle
- Axial cable

Atraumatic, 6.6 Fr., Oblique Distal Tip

270° Deflection upward/downward

Flexible Dual Channel Sensor Ureterorenoscope

The specialist for stone therapy

As the first and only flexible dual channel sensor URS on the market, the **COBRA vision** provides exacting performance.

Two working channels allow for laser lithotripsy and extraction of concretions without having to interrupt the procedure to change auxiliary instruments.

The dual channel **COBRA vision** features a special laser shifter for fixation and precise positioning of the laser fiber making it perfect for stone therapy.

Ureterorenoscopy

Sensor URS Picture

Two independent channels
for the simultaneous use of tipless baskets and laser fibers

COBRA VISION

Flexible Dual Channel Sensor Ureterorenoscope

- 270° deflection upward/downward
- Two independent irrigation and laser channels (3.6 Fr. and 2.4 Fr.) for the simultaneous use of tipless baskets and laser fibers
- Atraumatic, 5.2 Fr., beveled distal tip for easy insertion
- 9.9 Fr. sheath \varnothing
- Integrated LED illumination and distal image sensor
- Two programmable camera buttons capable of controlling up to four functions
- Special Imaging Mode (SIM) compatible
- Ergonomic handle
- Axial cable

Atraumatic, 5.2 Fr., Oblique Distal Tip

ENDOCAM Logic 4K

SIMply LOGICal

Your view into the future of endoscopic camera systems

4K Platform

The ENDOCAM Logic Camera Platform is a pioneer and trendsetter for groundbreaking new technologies. The **ENDOCAM Logic 4K** continues this tradition with a large number of impressive characteristics.

SIM Modes

SIM – Special Imaging Modes: The difference is in the detail

Alongside visualization of natural colors 6 digital modes are available as options. Depending on the situation, the Special Imaging Modes can improve tissue differentiation. The stored SIM can be switched on and off at the touch of a button using the camera head button.

COLOR CONTRAST I

Differentiated color display and contrast enhancement in images with a high proportion of red.

COLOR CONTRAST II

Differentiated color display, and contrast enhancement in pale images.

COLOR CONTRAST III

Strongly differentiated color display, and contrast enhancement in pale images.

STANDARD

Natural color display.

ENDOCAM Logic 4K

- **Brilliant 4K UHD resolution** of 3840 x 2160 pixels for live display
- **Integrated Special Imaging Modes (SIM):** Digital algorithms for easier tissue differentiation
- **Compatible** with all application parts and camera heads of ENDOCAM Logic HD
- **Storage** of high-resolution images and videos on USB storage devices
- **User-friendly**
Clinically developed presets for different disciplines
- **Integratable in core nova,** the Operating Room integration system from Richard Wolf

CONTRAST I

Intensified color display, and contrast enhancement in pale images.

CONTRAST II

Subdued color display for strongly saturated image scenes. The color intensity is reduced.

HDR (High Dynamic Range)

Reduction of overexposures. Lightening of shadows.
